

Jordan Solar Site Intelligence

A decision-support dashboard for identifying stronger solar-resource locations across Jordan.

1 / 4

Dashboard Objective

Evaluate solar-resource potential across Jordan using historical irradiance, weather and modeled PV performance data. The dashboard helps identify high-potential districts, understand seasonal behavior, and compare candidate locations consistently.

Daily Records

286K

Geographic Locations

131

Districts

34

Avg. Irradiance (kWh/m²/day)

5.90

WHERE?

Where are the strongest solar resources?

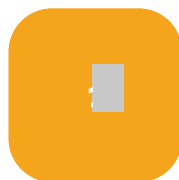

Open Solar Resource →

WHEN?

How does solar potential change by month and weather?

Open Seasonal Analysis →

WHICH?

Which districts perform best when compared side-by-side?

Open Site Comparison →

Solar Resource Overview

Explore geographic solar potential and district-level performance.

Year
